

Capital subaccounts

The **Capital subaccounts** option in the *Settings* tab allows you to create subaccounts accessible by all accounts listed under the *Capital Accounts* tab.

This feature enables grouping transactions within capital accounts into subaccounts such as:

- **Drawings**
- **Funds contributed**
- **Share of profit**
- *And more*

When entering a transaction involving any capital control account, you must first select a capital account from the options listed under the *Capital Accounts* tab. Then, choose one of the subaccounts specified in the Capital Subaccounts settings.

To view movements organized by capital accounts and subaccounts for a specific period, navigate to the *Reports* tab and select the **Capital Accounts Summary** report.
