

Currencies

The **Currencies** screen, found under the **Settings** tab, allows you to manage and tailor the currencies for your business transactions. This is especially useful for businesses involved in international activities, enabling you to establish a base currency and incorporate various foreign currencies.

The **Currencies** screen has the following sub-sections:

Foreign Currencies

The **Foreign Currencies** screen is where you can create and manage your list of foreign currencies. This allows you to record transactions in multiple currencies beyond your base currency.

See [Foreign Currencies](#) for more information.

Exchange Rates

The **Exchange Rates** screen is where you can create and manage a list of your exchange rates. Keeping your exchange rates up to date ensures accurate financial reporting and currency conversions.

See [Exchange Rates](#) for more information.

Base Currency

The **Base Currency** form is where you set the base currency for your business. This currency will serve as the default for all your financial reports and calculations.

See [Base Currency](#) for more information.
