# Tax Codes

Under the **Settings** tab, the **Tax Codes** screen allows you to create and manage tax codes that are relevant to your business. These tax codes play a crucial role in handling tax duties and applying tax rates to sales or purchases.

To create a new tax code, click the **New Tax Code** button.

For more information on how to set up a tax code, see **Tax Code — Edit**.

After creating at least one tax code, you can select it for use in most transactions. On the **Tax Codes** screen, you can also view the **Transactions** column, which shows the number of transactions utilizing each tax code.
